*The Porvoo Group is an international cooperative network coordinated by Finland and established in the Finnish city of Porvoo, as the name suggests, in April 2002 in connection with the eEurope 2002 programme. The primary goal of the Group is to promote a trans-national, interoperable electronic identity based on PKI (Public Key Infrastructure) technology and smart cards and chip ID cards as well as secure e-services in Europe. The majority of its members represent their respective national authorities but representatives of the business community as well as the European Commission and the UN have also contributed to its work. The US and Japan are closely involved in the Group alongside some thirty European nations. The Porvoo Group's two-day conferences are held every six months.*
